Race After Technology Aug 14 2022 From everyday apps to complex algorithms, Ruha Benjamin cuts through tech-industry hype to understand how emerging technologies can reinforce White supremacy and deepen social inequity. Benjamin argues that automation, far from being a sinister story of racist programmers scheming on the dark web, has the potential to hide, speed up, and deepen discrimination while appearing neutral and even benevolent when compared to the racism of a previous era. Presenting the concept of the "New Jim Code," she shows how a range of discriminatory designs encode inequity by explicitly amplifying racial hierarchies; by ignoring but thereby replicating social divisions; or by aiming to fix racial bias but ultimately doing quite the opposite. Moreover, she makes a compelling case for race itself as a kind of technology, designed to stratify and sanctify social injustice in the architecture of everyday life. This illuminating guide provides conceptual tools for decoding tech promises with sociologically informed skepticism. In doing so, it challenges us to question not only the technologies we are sold but also the ones we ourselves manufacture. Visit the book's free Discussion Guide here.

Anti-pollution Technologies for Vehicles Sep 15 2022

[Radical Technologies](#) Sep 22 2020 A field manual to the technologies that are transforming our lives Everywhere we turn, a startling new device promises to transfigure our lives. But at what cost? In this urgent and revelatory excavation of our Information Age, leading technology thinker Adam Greenfield forces us to reconsider our relationship with the networked objects, services and spaces that define us. It is time to re-evaluate the Silicon Valley consensus determining the future. We already depend on the smartphone to navigate every aspect of our existence. We're told that innovations—from augmented-reality interfaces and virtual assistants to autonomous delivery drones and self-driving cars—will make life easier, more convenient and more productive. 3D printing promises unprecedented control over the form and distribution of matter, while the blockchain stands to revolutionize everything from the recording and exchange of value to the way we organize the mundane realities of the day to day. And, all the while, fiendishly complex algorithms are operating quietly in the background, reshaping the economy, transforming the fundamental terms of our politics and even redefining what it means to be human. Having successfully colonized everyday life, these radical technologies are now conditioning the choices available to us in the years to come. How do they work? What challenges do they present to us, as individuals and societies? Who benefits from their adoption? In answering these questions, Greenfield's timely guide clarifies the scale and nature of the crisis we now confront —and offers ways to reclaim our stake in the future.

[Team Human](#) May 31 2021 "A provocative, exciting, and important rallying cry to reassert our human spirit of community and teamwork."—Walter Isaacson Team Human is a manifesto—a fiery distillation of preeminent digital theorist Douglas Rushkoff's most urgent thoughts on civilization and human nature. In one hundred lean and incisive statements, he argues that we are essentially social creatures, and that we achieve our greatest aspirations when we work together—not as individuals. Yet today society is threatened by a vast antihuman infrastructure that undermines our ability to connect. Money, once a means of exchange, is now a means of exploitation; education, conceived as way to elevate the working class, has become another assembly line; and the internet has only further divided us into increasingly atomized and radicalized groups. Team Human delivers a call to arms. If we are

to resist and survive these destructive forces, we must recognize that being human is a team sport. In Rushkoff's own words: "Being social may be the whole point." Harnessing wide-ranging research on human evolution, biology, and psychology, Rushkoff shows that when we work together we realize greater happiness, productivity, and peace. If we can find the others who understand this fundamental truth and reassert our humanity—together—we can make the world a better place to be human. [Natural Forms of Defense Against Biological, Chemical and Nuclear Threats](#) Dec 14 2019 The events that took place on September 11th caused Dr. John Brighton, a naturopathic health consultant, to ask himself questions about what role natural forms of healing might have in a scenario involving weapons of mass destruction (WMD). As he examined the issues and the nature of the threat, he felt assured that a naturalistic approach could make a significant contribution in conjunction with that offered by conventional medicine. Moreover, he felt that to use both would provide a more powerful deterrent than if either were used alone. The naturalistic approach would augment the use of drugs by adding 5 extra lines of defense aimed at supporting and strengthening the immune system to deal with such a dire event. These lines include: A psychological dimension A social dimension A preventative dimension An environmental dimension A specific dimension The whole idea of this holistic strategy is to employ prevention and immune-enhancing factors in order to reduce the level of crisis to begin with. As a result, the dependency on antibiotics (there are no effective antivirals) and other valuable medical resources can be considerably reduced, and, most importantly, preserved for when they would be needed most. Another benefit of integrating these two systems would add what Dr. Brighton calls "synergistic complexity" as a way to reduce the current crisis of germ resistance to many most potent antibiotics and to provide a holistic approach to all forms of WMD. The book clarifies the scope of the threat we face by examining: The variety of biological, chemical, and nuclear threats The factors involved in the creation of WMD The uncanny capacity of microbes to develop resistance to our medications The threat of bioengineering and the creation of superbugs How synergistic complexity could provide a possible solution A chapter is dedicated to focusing on the specific nature and challenges posed by each biological, chemical and nuclear agent. This includes: A description of the agent How it causes harm How it might be used as a weapon, and the possibility of it being used How it is detected diagnostically and in the field The conventional method of care and treatment The suggested natural forms of defense including herbs, vitamins & minerals, and other natural substances and healing therapies. The book ends with a forward-looking chapter on emerging technologies that have promise of increasing our level of defense against WMD. A

bibliography and a full section on resources are available.

Interactive Technologies and the Social Studies Jul 01 2021 Provides a comprehensive guide to and analysis of the expanding role of technology in the social studies curriculum and classroom.

Science and Technology Nov 12 2019

French Philosophy of Technology May 19 2020 Offering an overall insight into the French tradition of philosophy of technology, this volume is meant to make French-speaking contributions more accessible to the international philosophical community. The first section, "Negotiating a Cultural Heritage," presents a number of leading 20th century philosophical figures (from Bergson and Canguilhem to Simondon, Dagognet or Ellul) and intellectual movements (from Personalism to French Cybernetics and political ecology) that help shape philosophy of technology in the Francophone area, and feed into contemporary debates (ecology of technology, politics of technology, game studies). The second section, "Coining and Reconfiguring Technoscience," traces the genealogy of this controversial concept and discusses its meanings and relevance. A third section, "Revisiting Anthropological Categories," focuses on the relationships of technology with the natural and the human worlds from various perspectives that include anthropotechnology, Anthropocene, technological and vital norms and temporalities. The final section, "Innovating in Ethics, Design and Aesthetics," brings together contributions that draw on various French traditions to afford fresh insights on ethics of technology, philosophy of design, techno-aesthetics and digital studies. The contributions in this volume are vivid and rich in original approaches that can spur exchanges and debates with other philosophical traditions.

Anti-tank Warfare: Technologies, Trends, Weaponry (4) Oct 24 2020

Children, Technology, and Culture Jan 27 2021 Hidden Hands focuses on a specific and neglected area of contemporary child welfare; that of children's paid work and labour.

Department of Defense Appropriations for Fiscal Year 1980: Posture statements Apr 17 2020

The Loop Jul 13 2022 This eye-opening narrative journey into the rapidly changing world of artificial intelligence reveals the dangerous ways AI is exploiting the unconscious habits of our minds—and the real threat it poses to humanity. Artificial intelligence is going to change the world as we know it. But the real danger isn't some robot that's going to enslave us: It's our own brain. Our brains are constantly making decisions using shortcuts, biases, and hidden processes—and we're using those same techniques to create technology that makes choices for us. In *The Loop*, award-winning science journalist Jacob Ward reveals how we are poised to build all of our worst instincts into our AIs, creating a narrow loop where each generation has fewer, predetermined, and even dangerous choices. Taking us on a world tour of the ongoing, real-world experiment of artificial intelligence, *The Loop* illuminates the dangers of writing dangerous human habits into our machines. From a biometric surveillance state

in India that tracks the movements of over a billion people, to a social media control system in China that punishes deviant friendships, to the risky multiple-choice simplicity of automated military action, Ward travels the world speaking with top experts confronting the perils of their research. Each stop reveals how the most obvious patterns in our behavior—patterns an algorithm will use to make decisions about what's best for us—are not the ones we want to perpetuate. Just as politics, marketing, and finance have all exploited the weaknesses of our human programming, artificial intelligence is poised to use the patterns of our lives to manipulate us. *The Loop* is a call to look at ourselves more clearly—our most creative ideas, our most destructive impulses, the ways we help and hurt one another—so we can put only the best parts of ourselves into the thinking machines we create.

Recent Advancement on Material Science and Manufacturing Technologies Mar 29 2021

Selected, peer reviewed papers from the 2nd International Conference on Materials Science and Manufacturing (ICMSM 2013), March 29-31, 2013, Zhangjia Jie, China

Anti-pollution Technologies for Vehicles

Feb 25 2021 Over the past decade significant reductions in new vehicle emissions have been attained as a result of improvements in basic automotive technology. These improvements are a result of improvements in basic engine and exhaust technology; they are not the result of the incorporation of expensive and exotic new equipment. Today, many (but of course not all) gasoline powered vehicles are capable of meeting the California LEV emissions standards. Further reductions in new vehicle emissions can be attained through further refinements of the basic technology of the gasoline engine (and exhaust system). Even under the most pessimistic assumptions, passenger vehicle emissions of three (hydrocarbon, nitrogen oxide, and particulate matter) out of the four major pollutants are likely to fall considerably over the next twenty-five years. Emissions of carbon monoxide are forecast to rise. While the presence of carbon monoxide is a health hazard it has not been of principal concern in the Phoenix area. This is because our summer ozone problem is caused by hydrocarbon and nitrogen oxide emissions and our winter "brown cloud" problem is attributed to particulate matter. Thus, Phoenix's two major air pollution problems are likely to be mitigated substantially by the Federal Tier 2 standards. However, the increases in carbon monoxide emissions may lead to new problems for the Phoenix area.

Anti-tech Revolution Jan 19 2023 "There are many people today who see that modern society is heading toward disaster in one form or another, and who moreover recognize technology as the common thread linking the principal dangers that hang over us... The purpose of this book is to show people how to begin thinking in practical, grand-strategic terms about what must be done in order to get our society off the road to destruction that it is now on." --from the Preface. Publisher's Description: A comprehensive historical analysis explaining the futility of social control and the catastrophic influence of technological growth on human social and planetary

ecological systems. Distilled from the critical socio-historical analysis is the author's own theoretical framework for effecting meaningful and lasting change.

Age as Disease Feb 14 2020 *Age as Disease* explores the foundations of gerontology as a discipline to examine the ways contemporary society constructs old age as a disease-state. Framed throughout as 'gerontological hygiene', this book examines contemporary regimes, strategies and treatment protocols deployed throughout Australia, the United States, and the United Kingdom. The book deploys critical cultural theories such as biopolitics, somatechnics, ethics, and governmentality to examine how anti-aging technologies operate to problematise the aging body as always-already diseased, and how these come to constitute a movement of abolition, named here as 'gerontological hygiene'.

Innovation and Its Enemies Feb 08 2022 It is a curious situation that technologies we now take for granted have, when first introduced, so often stoked public controversy and concern for public welfare. At the root of this tension is the perception that the benefits of new technologies will accrue only to small sections of society, while the risks will be more widely distributed. Drawing from nearly 600 years of technology history, Calestous Juma identifies the tension between the need for innovation and the pressure to maintain continuity, social order, and stability as one of today's biggest policy challenges. He reveals the extent to which modern technological controversies grow out of distrust in public and private institutions and shows how new technologies emerge, take root, and create new institutional ecologies that favor their establishment in the marketplace. *Innovation and Its Enemies* calls upon public leaders to work with scientists, engineers, and entrepreneurs to manage technological change and expand public engagement on scientific and technological matters.

The Era of Assisted Reproductive Technologies Tailored to the Specific Necessities of Species, Industry and Case Reports

Apr 10 2022 Nowadays, assisted reproductive technologies (ARTs) have a pivotal role not only in achieving fertilization in subfertile animals, but they are also involved in the management of the herd, decreasing disease spread and even allowing offspring sex selection. Nonetheless, there are differences between species or even within species that have led researchers worldwide to focus on those differences in order to bypass these specific difficulties. This Special Issue, titled "The Era of Assisted Reproductive Technologies Tailored to the Specific Necessities of Species, Industry and Case Reports" and published in *Animals*, is composed of 12 original manuscripts and three reviews that offer an overview of current and future ARTs used to improve reproductive outcomes, mainly focused on farm animals, such as horse, pig, bovine, rabbit and ovine species. Thus, the Special Issue covers information from the classical point of view, including comparative studies of different semen extenders, to the most advanced technologies of sperm selection by thermotaxis or chemoattractants, as well as the improvement of sperm features by red light irradiation. The female and embryo contributions to ART outcomes are also

covered, for instance, with a study that improves our knowledge by the metabolomic description of follicular fluid composition or the description of better culture conditions of oocytes. In brief, this Special Issue provides a balanced overview of emerging techniques and technologies used to preserve, improve, rescue or even create fertility for domestic farm animals with high economic impact.

Prometheus and Gaia Dec 26 2020

Prometheus and Gaia examines the ideological positions of Futurism and Eco-Pessimism. While these are rarely spoken about in mainstream discourse, they do have strong resonances in today's popular politics and culture. In light of existential threats posed by climate change, disruptive technologies and economic crises, many have grown weary of the "small fixes" offered by mainstream policy-makers. Radical change thus appears necessary, as Futurism and Eco-Pessimism emerge as two fundamental challenges to the status quo. The Futurist claims that the current dynamism of technology is incompatible with human limitations, while the Eco-Pessimist sees the climate crisis as symptomatic of a broader human domination over nature. What these seemingly opposite currents have in common is a shared rejection of the human frame as grounding politics; each seeks to subordinate the human in favor of a wholly alien other, either in the form of an anarchic nature or a dynamic technology. To transcend this strange coincidence of opposites, Prometheus and Gaia makes the positive case for a humanism that is rationalist without being anthropocentric.

Anti-Human Theology Dec 06 2021 Due to the vigour of its re-engineering of the world by its technologies, western society has entered into a postnatural condition in which standard divisions between the natural and artificial are no longer convincing. This title develops an 'anthropology' that doesn't repeat Christianity's history of anthropocentrism but instead criticises it.

The New Communications Technologies Mar 17 2020 A complete explanation of today's communication technologies, and their impact! *A Theoretical Taxonomy and Analysis of Anti-spam Technologies* Oct 12 2019

Advances in CMP Polishing Technologies

Jan 15 2020 CMP and polishing are the most precise processes used to finish the surfaces of mechanical and electronic or semiconductor components. Advances in CMP/Polishing Technologies for Manufacture of Electronic Devices presents the latest developments and technological innovations in the field - making cutting-edge R&D accessible to the wider engineering community. Most of the applications of these processes are kept as confidential as possible (proprietary information), and specific details are not seen in professional or technical journals and magazines. This book makes these processes and applications accessible to a wider industrial and academic audience. Building on the fundamentals of tribology - the science of friction, wear and lubrication - the authors explore the practical applications of CMP and polishing across various market sectors. Due to the high pace of development of the electronics and semiconductors industry, many of the presented processes and applications come from these industries. Demystifies scientific

developments and technological innovations, opening them up for new applications and process improvements in the semiconductor industry and other areas of precision engineering Explores stock removal mechanisms in CMP and polishing, and the challenges involved in predicting the outcomes of abrasive processes in high-precision environments The authors bring together the latest innovations and research from the USA and Japan

Forged Consensus Jun 19 2020 "This is a subtly argued work well versed in the existing literature and deeply immersed in the historical sources. The author's balance between theory and narrative will be attractive both to political scientists and to historians, and the book does a fine job of using history to inform current policy."---Kenneth Lipertuo, University of Houston --Book Jacket.

Technology and the Politics of Instruction

Sep 03 2021 This study of computer-mediated instruction (CMI) in a U.S. research university - the site of nationally known innovations in this area - ties together a range of issues usually separated in discussions of instructional technology and examines softer slighted topics, such as the articulations of local and national practices. It questions the common vocabulary for making sense of CMI and contributes to educational change theory by showing how CMI has unfolded both from the top-down and the bottom-up.

Wind Turbine Icing Physics and Anti-/De-Icing Technology Oct 16 2022 Wind Turbine Icing Physics and Anti-/De-Icing Technology gives a comprehensive update of research on the underlying physics pertinent to wind turbine icing and the development of various effective and robust anti-/de-icing technology for wind turbine icing mitigation. The book introduces the most recent research results derived from both laboratory studies and field experiments. Specifically, the research results based on field measurement campaigns to quantify the characteristics of the ice structures accreted over the blades surfaces of utility-scale wind turbines by using a Supervisory Control and Data Acquisition (SCADA) system and an Unmanned-Aerial-Vehicle (UAV) equipped with a high-resolution digital camera are also introduced. In addition, comprehensive lab experimental studies are explored, along with a suite of advanced flow diagnostic techniques, a detailed overview of the improvements, and the advantages and disadvantages of state-of-the-art ice mitigation strategies. This new addition to the Wind Energy Engineering series will be useful to all researchers and industry professionals who address icing issues through testing, research and industrial innovation. Covers detailed improvements and the advantages/disadvantages of state-of-the-art ice mitigation strategies Includes condition monitoring contents for lab-scale experiments and field tests Presents the potential of various bio-inspired icephobic coatings of wind turbine blades

Anti-Fatigue Design and Manufacturing Technologies

Apr 29 2021 The present volume comprises peer-reviewed papers covering CIMS and manufacturing systems, advanced anti-fatigue design technologies, finite-element analysis and structure optimization based upon anti-fatigue, design and manufacturing of

composite components, intelligent mechatronics and robotics, compound machine tools, rapid prototyping, printing (ex. embossing), PDM, ERP, CRM, FMS, PLM, logistics and supply chain, RPM and other related topics. This work will be invaluable to production and research engineers, and to research students and academics interested in the field.

Systemic Delivery Technologies in Anti-Aging Medicine: Methods and Applications

Feb 20 2023 This book presents a multidisciplinary assessment of the state of science in the use of systemic delivery technologies to deliver anti-aging therapeutics now under development. There is a gap between basic aging research and the development of intervention technologies. This major obstacle must be overcome before biogerontological interventions can be put into clinical practice. As biogerontology comes to understand aging as a systemic degenerative process, it is clear that there is a pressing need for technologies that enable cells and tissues in a fully developed adult body to be manipulated systemically to combat aging. The authors review advances in the chemistry and engineering of systemic delivery methods and analyze the strengths and limitations of each. The book is organized into six sections. The first offers an overview of the need for systemic delivery technologies alongside the development of anti-aging therapies and describes approaches that will be required for studying the properties and efficiency of carriers for systemic delivery. Sections II, III and IV describe recent advances in a range of strategies that may enable systemic delivery to help combat aging conditions ranging from cell senescence to decline in immune function and hormonal secretion. Section V discusses practical strategies to engineer and optimize the performance of delivery technologies for applications in systemic delivery, along with their working principles. The final section discusses technical and biological barriers that must be overcome as systemic delivery technologies move from research laboratory to clinical applications aimed at tackling aging and age-associated diseases. Benefiting scholars, students and a broader audience of interested readers, the book includes helpful glossary sections in each chapter, as well as sidebars that highlight important notes, and questions for future research.

Consumer Privacy and Government Technology Mandates in the Digital Media Marketplace Aug 22 2020

Technology and Anti-money Laundering Dec 18 2022 . . . a stimulating look at the hard work done in many specialisms that collectively seek to combat money laundering. Sally Ramage, The Criminal Lawyer While there is much noise about the control of money laundering, there are few whose work is able to rise above the din and in clear notes contribute in a constructive manner to the debate. This work is not only an intelligent discussion of many of the substantive issues relating to the control of money laundering, but a great deal more. Drawing on systems theory and seeing the control of money laundering particularly from the standpoint of technology as complex and integral to the proper and effective operation of financial institutions, the author addresses in a novel and

practical way the design and management of risk based compliance. The theory is tested, not only in terms of viable technology, but also in an actual case study involving real issues in a bank. Consequently, those concerned with the formulation of policy, the design of controls and procedures and the implementation of such will find the contribution that this book makes of great significance. Barry Rider, Bryan Cave LLP, UK This book avoids the usual trap of interminably listing AML war stories. Instead Dr. Demetis presents a solid theoretical foundation for AML research and practice. He gives a damning critique of the way so-called technological solutions are used uncritically by some AML professionals, and analyses the risk-based approach, describing its problems and ways of avoiding them. He presents a fascinating in-depth case study of a financial institution, and a short case of a bank using technology to improve its True Positive Rate substantially to 17 per cent. Ian Angell, London School of Economics, UK Dr Demetis makes a great contribution to our understanding of anti-money laundering at both a systems and practical level. [He] writes as someone who not only thinks deeply about these issues but, as the in-depth case examples show, has tried to see how far technology can address some audacious goals. Readers will learn that while risk-based approaches to anti-money laundering have been an interesting regulatory development, practical implementation, despite the hype of technology vendors, is still at a primordial state . Michael Mainelli, Gresham College and Z/YEN Group, UK This insightful book examines the influence of information systems on anti-money laundering (AML). It builds on systems theory in order to develop a coherent theoretical framework that can be used for AML research. By using a case study of a major financial institution in the EU-area, a number of technological influences on AML are deconstructed and are used to examine the role that technology plays within AML. The book provides a systems theoretical description of the effects of technology on AML and offers considerations on the risk-based approach the most important contemporary evolution within regulatory initiatives on AML and terrorism financing. Technology and Anti-Money Laundering will appeal to researchers of financial crime and AML as well as those interested in information systems and systems theory. A number of considerations for practitioners are also discussed, including the risk-based approach and the integration of AML-technology in financial institutions, as well as an important data-mining application. Money Laundering Reporting Officers (MLROs) in financial institutions and central bankers will also find much of interest in this book.

Frailty and Herbal Medicines- From Molecular Mechanisms to Clinical Efficacy Jun 12 2022

Job Design and Technology Nov 24 2020 Despite global competition and the need for speed, flexibility and quality, trends such as lean production and McDonalidization show that Taylorism remains alive and well in the contemporary workplace. There is however a countermovement, particularly in North-West Europe, where successful alternatives are being pursued. Job Design and Technology fills an

important gap, by analyzing 150 cases of anti-Taylorist initiatives in Scandinavia, the UK and the Netherlands. It aims to show that real change can be achieved in the workplace and the quality of the working experience greatly enriched by moving away from the drudgery of the assembly line.

Technological Slavery (Large Print 16pt) Mar 09 2022 Theodore Kaczynski saw violent collapse as the only way to bring down the techno-industrial system, and in more than a decade of mail bomb terror he killed three people and injured 23 others. One does not need to support the actions that landed Kaczynski in supermax prison to see the value of his essays disabusing the notion of heroic technology while revealing the manner in which it is destroying the planet. For the first time, readers will have an uncensored personal account of his anti-technology philosophy, including a corrected version of the notorious "Unabomber Manifesto," Kaczynski, s critique of anarcho-primitivism, and essays regarding "the Coming Revolution."

Quantum, Nano, Micro and Information Technologies Nov 05 2021 Volume is indexed by Thomson Reuters CPCI-S (WoS). The objective of this special collection was to provide a forum for researchers, educators, engineers and government officials, involved in the general areas of Quantum, Nano, Micro Technologies, mechatronics, robotics, automation, power and sensors, to present their latest research results and to exchange views on the future research paths in these fields. **Against Technology** Jan 07 2022 This book addresses the question of what it might mean today to be a Luddite--that is, to take a stand against technology. Steven Jones here explains the history of the Luddites, British textile workers who, from around 1811, proclaimed themselves followers of "Ned Ludd" and smashed machinery they saw as threatening their trade. Against Technology is not a history of the Luddites, but a history of an idea: how the activities of a group of British workers in Yorkshire and Nottinghamshire came to stand for a global anti-technology philosophy, and how an anonymous collective movement came to be identified with an individualistic personal conviction. Angry textile workers in the early nineteenth century became romantic symbols of a desire for a simple life--certainly not the original goal of the actions for which they became famous. Against Technology is, in other words, a book about representations, about the image and the myth of the Luddites and how that myth was transformed over time into modern neo-Luddism.

Science and Technology Policies for the Anti-Terrorism Era Nov 17 2022 The objectives of the papers included in this volume were to critically consider the science and technology policies necessary for defence against terrorism and other threats to security; to assess the priorities for governments, universities, national laboratories and industrial firms; to identify how governments and the science and technology community can most effectively work together to enhance our security; and to share the experiences of policy makers and policy analysts. The importance and relevance of this selection of papers to the policy community is reflected in the seniority of the contributors. These included Dr. Parney

Albright who held the position of Assistant Secretary for Science & Technology at the US Department of Homeland Security as well as senior figures from the UK Home Office, UK Office of Science & Technology, the European Commission and NATO.

To Save Everything, Click Here May 11 2022 The award-winning author of The Net Delusion shows how the radical transparency we've become accustomed to online may threaten the spirit of real-life democracy
